

Dushani Naveendhya

Intern - Software Engineer

Eswatta • dushaninaveendhya@gmail.com • 94705812904 • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Profile Summary

Results-driven Software Engineering undergraduate with a strong foundation in full-stack web and mobile application development, with a particular emphasis on backend development. Proficient in designing and implementing scalable server-side applications using technologies such as MongoDB, Express.js, React.js, and Node.js (MERN), Java, PHP, and Kotlin. Experienced in applying software architecture principles, including Microservices architecture, MVC, and client-server models, to build maintainable and efficient systems. Passionate about developing user-centric applications with features such as role-based access control and intuitive UI/UX design, while ensuring backend performance and data integrity.

Projects

AquaChamp: Clean Water and Sanitation Web App – Full Stack -

[Github](#)

Full-stack gamified educational web application designed to educate children about hygiene and sanitation practices (UNSDG 6 aligned).

Contribution: As a Full Stack Developer, developed the Progress & Rewards module, implemented achievement tracking, badge management with badge notifications (Lottie Animation), user progress monitoring dashboard and the leaderboard. Applying software architecture principles such as MVC Architecture to structure the backend for scalable, maintainable, and efficient data handling. Designing RESTful APIs, database schemas, and server-side logic to support seamless user progress tracking and dashboard functionality.

MediCore: AI-Enabled Smart Healthcare Appointment & Telemedicine Platform using Microservices – Full Stack -

[Github](#)

Full-stack healthcare appointments and telemedicine platforms developed using Microservices architecture to streamline real-time healthcare management. The platform was containerized using Docker and deployed with Kubernetes.

Contribution: As a Full Stack Developer, developed the Payment Service and Appointment Service by integrating the PayHere payment gateway for secure online transactions and implementing automated appointment confirmation after successful payments. Designed dashboards for both doctors and patients to view and manage appointment details in real time. Developed RESTful APIs, backend business logic, and database schemas to support seamless appointment scheduling, payment processing, and efficient communication between services in the microservices environment.

AyuManthra: Ayurvedic Medicine and Clinic System – MERN Stack -

[Github](#)

Full-stack Ayurvedic clinic management system for scheduling doctor appointments and managing consultations.

Contribution: As a Full Stack Developer, developed the Appointment Scheduling and Consultation Management module, implementing role-based access control to manage different user permissions. Structured the backend using layered architecture and MVC patterns for clear separation of concerns and maintainable code. Created server-side logic, RESTful endpoints, and database schemas to ensure efficient appointment handling, consultation tracking, real-time notifications, and secure data operations.

MotorBay: Online Vehicle Spare Parts Management System – HTML, Tailwind CSS, JavaScript, Java, SQL -

[Github](#)

Full-stack vehicle spare parts management system with authentication and role-based dashboards.

Contribution: As a Full Stack Developer, implement user authentication and role-based access control for admins, suppliers, and customers. Designed SQL database schemas and developed server-side logic in Java to handle secure data management, order processing, and smooth dashboard functionality.

Urban Heaven: Online Apartment Sales System – HTML, CSS, PHP, SQL -

[Github](#)

An online platform for apartment sales management systems with authentication and role-based dashboards.

Contribution: As a Backend and Frontend Developer, implement user authentication and role-based access control for admins, suppliers, and customers. Designed SQL database schemas and used PHP to ensure secure login and proper access control for all users.

DailyBloom: Personal Wellness App – Kotlin -

[Github](#)

Contribution: Developed an Android wellness app for habit tracking, mood logging, hydration reminders, and interactive mood trend visualization. Participated in requirement review sessions and project coordination activities.

Education

Sri Lanka Institute of Information Technology (SLIIT)

BSc (Hons) Information Technology – Software Engineering (2023–2027)

Current CGPA: 3.21

ICBT Campus

Diploma in Information & Communication Technology, 2023

Aquinas College of Higher Studies

Diploma in English Language & Literature, 2023

Devi Balika Vidyalaya, Colombo 08

G.C.E. Advanced Level (Bio-Science Stream), 2022

Certifications

AI & Machine Learning Certificate – Stage 1 — **SLIIT**

Diploma in Information & Communication Technology — **ICBT**

Diploma in English Language & Literature — **Aquinas College**

Skills

Mobile Development - Android (Kotlin)

Web Development - HTML, CSS, JavaScript, MERN (MongoDB, Express.js, React.js, Node.js)

Programming Languages - Java, Python, Kotlin, PHP, C, C++

Databases - MySQL, MongoDB, SQL, PostgreSQL

Tools & IDEs - VS Code, Docker, Kubernetes, Android Studio, Figma, Eclipse, Git, GitHub

Soft Skills - Communication, Teamwork, Problem Solving, Time Management, Leadership
